## HARD SKILLS

## SOFT SKILLS

Highly Motivated  
Adaptability  
Autonomy  
Communication

## PROFIL

**Junior Web Developer** currently working as a field technician with more than 5 years of experience. I learned to work independently, make detailed reports, organize projects, communicate and stock management.

I also learned to configure equipment, which I enjoyed very much. After that, I decided to go into web development to do what I love.

**I learned and realized** different **projects by myself** thanks to FreeCodeCamp

The stack used is mainly **HTML, CSS, Javascript, NodeJs, C# and .Net**

Tech is a fast moving industry and **I am motivated** to continuously learn as my certificates can attest.

## COURSES

**Back End Development and APIs, freeCodeCamp** - JUNE 2021

**Data Visualisation, freeCodeCamp** - MAY 2021

**Front End Development Libraries, freeCodeCamp** - APRIL 2021

**Javascript Algorithms and Data Structures, freeCodeCamp** - NOV. 2020

**Responsive Web Design, freeCodeCamp** - SEPT. 2020

## EMPLOYMENT HISTORY

**IT Field Engineer, Ericsson, Belgium** - MAY 2018

My job was to control alarms, change or repair parts, configure 2G, 3G, 4G cards and transmissions. I also had to make reports to send to subcontractors. also helped to manage various projects such as TomorrowLand, Rock Werchter, Pukklepops, Spa-Francorchamps, ...

The telecommunication world is a bit like the development world, it changes fast. That's why I'm constantly learning.

This allowed me to acquire skills like:

- autonomy (I worked alone and had to manage my interventions)
  - stock management
  - report writing (I sent detailed reports with photos during my interventions to be able to invoice the customer or send subcontractors)
  - communication
- (I worked in repeaters which were sometimes located in companies)
- understanding and acting on priority interventions
- (I had to manage and plan interventions according to their priorities)

**Electrician, N2M Electricity solution, Namur** - SEPT. 2013 - FEB 2016

As an electrician, I had to install and maintain the electrical installations. Whether domestic or industrial as well as low or high voltage.

In addition to the technical part, I had to manage the customers in order to communicate on the progress of the building site, to manage the parts in order to ensure the availability of this one and to finish, to manage the deadlines.

## EDUCATION

**Chef d'entreprise en électricité, Électricien, IFAPME, Namur** - SEPT. 2013 - JUNE 2018

**CESS, Mathématiques, sport, langue (anglais, neerlandais)** - SEPT. 2009 - JUNE 2012  
Collège notre de la paix Erpent, Erpent
